Summary

Frontend Engineer who works across the stack, with 1.5+ years shipping ReactJS and TypeScript features end to end, from billing modules and an AI workflow tool for CJ to Cafemaps, a product built and run solo to 500 registered users with no paid ads. Uses AI coding agents daily.

Experience

Frontend Developer Oct 2025 - Present

WALA ICT

CJ CINEMA GEN: internal AI workflow tool built for CJ, used by 20+ specialists. Team of 6, 2 frontend.
Stack: ReactJS, TypeScript, React Flow, WebSocket, Next.js

- Supported **1000+ AI models with zero manual config** through a React Flow canvas synced to WaveSpeed's open source model hub.
- Absorbed **differences between model input schemas** with schema driven node rendering, so any synced model runs from the canvas.
- Gave users **live feedback on every run** by extending the existing WebSocket layer to render status and results, alongside the model input to payload mapping.
- **Sped up delivery** with AI coding agents such as Codex and Claude, including 10 canvas toolbox tools written by agents and verified against expected output.

Fullstack Developer Mar 2025 - Aug 2025

OneMedic JSC

MedicHIMS: patient intake system for hospitals and clinics. Owned license, payment, and pricing modules. Team of 8.
Stack: ReactJS, TypeScript, React Query, React Hook Form, Redux, NestJS, PostgreSQL, CoreUI

- Supported **live billing operations** by shipping the licensing, payment, and pricing modules from Figma designs, with API integration and extra NestJS endpoints.
- Cut **manual UI work** for other modules by extending the schema driven dynamic config form, built with React Hook Form, Redux Thunk, and React Query.
- Improved **UI consistency and reuse** with shared Select and Input components on CoreUI, plus i18n support.

Projects

Cafemaps | *Next.js, NestJS, Prisma, PostgreSQL/PostGIS, Cloudinary, Vercel* cafemaps.net

Café discovery platform built and run solo across product, frontend, backend, and deployment.

- Grew to **500 registered users and 15,000 visitors** through organic Threads posts alone, with no paid ads.
- Turned visitors into contributors with a submission to publish flow, producing **30+ community contributed cafés**.
- Kept discovery **working through third party outages** with PostGIS geospatial search and fallback handling.
- Built a **vibe based quiz with 14 café personas** and shareable illustrated result cards, so visitors can find a café that fits them and share the result.
- Sourced user photos through Instagram DM outreach and wrote reviews from **150+ cafés visited in Saigon**.

Education

Ton Duc Thang University

B.S. in Software Engineering *Sep 2020 - May 2025*

English: Professional working proficiency, TOEIC 875 Listening and Reading

Technical Skills

Frontend: ReactJS, Next.js, TypeScript, React Flow, Tailwind CSS, React Hook Form
State and Data: Redux, Zustand, React Query, WebSocket
Backend and Tools: Node.js, NestJS, PostgreSQL/PostGIS, Prisma, Git, Vercel
AI and Testing: Codex and Claude from context to PR review, Playwright UI tests via AI agents
